NOTICE TO THE MARKET

WEG structures for software and industry business 4.0

WEG S.A. (B3: WEGE3 / OTC: WEGZY), announces the creation of a new digital business structure to accelerate the development of embarked and/or external software solutions to the company's traditional products, as well as transforming its real-time manufacturing and process management system into a business.

The new structure will act in a matrix form, fomenting and supporting all the company's business units for the greater application of new technologies as augmented reality and artificial intelligence in our products as well as to develop digital services. These actions, coupled with the mission to develop the business of sensing, IIoT and monitoring software and data analysis, WEG will be offering to its customers the backbone of the "industry 4.0".

To be ahead of this business, WEG has appointed Mr. Carlos José Bastos Grillo, bachelor of Mechanical Engineering from Universidade Federal do Rio Grande, graduate degree in Production Engineering from Universidade São Judas Tadeu and postgraduate in Business Management from Fundação Getúlio Vargas. At WEG since 1997, Mr. Grillo currently serves as Industrial Director and has long experience in products, industrial processes, engineering and software development.

Throughout its history WEG has been investing and developing itself permanently in the supply of electric motors, products and automation systems for the industry and energy sector. The company currently offers a broad range of automation through the supply of products and services from the industrial base to the higher levels of control and supervision. With the new structure, the Company's strategy is now to move towards the software and solutions business of IIoT for the industry 4.0 as well as to offer increasingly complete and innovative solutions to customers.
